## TO SERVICE PERSONNEL

- Critical Components Information.**  
Components having special characteristics are marked  $\Delta$  and must be replaced with parts having specifications equal to those originally installed.
- Leakage Current Measurement (For 120V Model Only).**  
When service has been completed, it is imperative that you verify that all exposed conductive surfaces are properly insulated from supply circuits.

  - Meter impedance should be equivalent to 1500 ohm shunted by 0.15  $\mu$ F.
  - Leakage current must not exceed 0.5mA.
  - Be sure to test for leakage with the AC plug in both polarities.

### POLARIZATION

This tuner product is equipped with a polarized alternating-current line plug (a plug having one blade wider than the other). This plug will fit into the power outlet only one way. This is a safety feature. (U, C Model only)

# ADJUSTMENTS

## ● Adjustment points

### 1. Before Adjustment

- 1) Start adjustment approximately 5 minutes after the power has been turned on in order to stabilize circuit operation.
- 2) Adjust the OSC coil and IFT using a high-frequency or nonferrous screwdriver.
- 3) Adjust the FM section first, then adjust the AM section.
- 4) Set the switches to the following positions unless otherwise specified.  
 MODE ..... AUTO ST  
 BLEND ..... OFF  
 IF MODE ..... AUTO WIDE  
 RF ATT ..... OFF  
 ANTENNA ..... A
- 5) Be sure to carry out adjustments after installing the bottom cover.

### 2. POWER SUPPLY Check

Confirm that the voltages specified below appear across each terminal and E of the TUNER CIRCUIT BOARD.

Terminal	Voltage	Measuring instrument
+30	+29 ±1V	DCVM
+12	+12.5 ±0.5V	
-12	-12.5 ±0.5V	
+6	+6V ±0.5V	

### 3. Measuring Instruments

- ST SG ..... Stereo Signal Generator
- AM SG ..... AM Signal Generator
- OSC ..... Oscillator
- DIST M ..... Distortion Meter
- FC ..... Frequency Counter
- AC VM ..... AC Voltmeter
- Center Meter ..... Ji00036 or equivalent
- DC VM ..... DC Voltmeter

### 4. FM Tuner Section

- Use 19kHz LPF for output terminals and carry out auditory compensation. Then connect the oscilloscope, AC voltmeter and distortion meter.
- To check the optimum tuning point during adjustment, connect the tuning meter (Ji00036 or equivalent; current sensitivity: 250uA) as shown in the figure.
- The accuracy of FM SG should be within ±1kHz.
